**The Report: Mexico 2014** Sep 06 2020 The second-largest economy in Latin America, Mexico seems poised to enter a new growth phase as the government of Enrique Peña Nieto implements radical changes in a number of sectors across the economy. The reforms, aimed at raising the competitiveness of the Mexican economy, have the potential to establish Mexico's position as a regional powerhouse. Optimism surrounding the recent wave of reforms, coupled with a stable macroeconomic environment and an improved credit rating from international agencies, has placed Mexico centre-stage. Despite slower than anticipated growth of 1.1% in 2013, a wave of reforms affecting a range of sectors is expected to bring a new dynamism to the economy and continue to attract increasing amounts of foreign investment. A highly anticipated energy reform approved by Congress in 2013 will for the first time in decades open the nationalised oil industry to foreign investment, while a new public-private partnership law is set to provide the climate of legal certainty needed to attract private investment in the myriad of sectors undergoing expansion. While challenges remain, in particular informality and deficient domestic supply chains, growth prospects remain positive for the second-largest economy in Latin America.

*Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* Aug 25 2019 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including

autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
