Lives in Science Mar 01 2020
What can we learn when we follow people over the years and across the course of their professional lives? Joseph C. Hermanowicz asks this question specifically about scientists and answers it here by tracking fifty-five physicists through different stages of their careers at a variety of universities across the country. He explores these scientists' shifting perceptions of their jobs to uncover the meanings they invest in their work, when and where they find satisfaction, how they succeed and fail, and how the rhythms of their work change as they age. His candid interviews with his subjects, meanwhile, shed light on the ways career goals are and are not met, on the frustrations of the

academic profession, and on how one deals with the boredom and stagnation that can set in once one is established. An in-depth study of American higher education professionals eloquently told through their own words, Hermanowicz's keen analysis of how institutions shape careers will appeal to anyone interested in life in academia.
The Fourth Industrial Revolution Jun 03 2020
World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have

the opportunity to contribute to developing new frameworks that advance progress.
[Occupation-Based Activity Analysis](#) Jul 05 2020
Occupational therapists use occupations and activities as not just a goal, but also as a treatment medium, therefore, they must understand both the uniqueness of a client's occupations and how an activity can be used therapeutically. To analyze the complexity of an occupation takes much more depth of understanding of the person engaging in it, his or her environment, and the uniqueness of the occupation a person has chosen. The new Second Edition of *Occupation-Based Activity Analysis* continues the tradition of teaching students and clinicians the process of conducting activity analyses and occupation-based activity analyses. Dr. Heather Thomas has updated *Occupation-Based Activity Analysis, Second Edition* to reflect the significant changes made to the activity analysis process and terminology in the *Occupational Therapy Practice Framework, Third Edition*. As in an activity analysis, occupation-based activity analysis looks at what is required for full participation, yet goes beyond analyzing the activity; it looks at what it means for the person engaging in it and how and where it is performed by that person. Inside *Occupation-Based Activity Analysis, Second Edition*, each chapter is dedicated to a component of the activity analysis process and corresponding section of the Framework. Chapters have been restructured based on a greater emphasis on occupation-based activity analysis. From start to finish, readers are guided through identifying the occupation, sequence and timing, objects and properties, space and social demands, body functions, and structures and performance skills required. New in the Second Edition: Chapters throughout the text have been updated to reflect the changes in the Framework A new chapter to reflect the new addition to the Activity Demands section of the Framework Changes in terminology and definitions in the areas of occupation, performance skills, and body functions Additional activities provided at the end of each chapter Appendices and forms

have been updated to reflect the changes in the Framework Images have been updated with greater clarity and resolution Updated and new instructor materials for faculty to use in the classroom Instructors in educational settings can visit www.efacultylounge.com for additional materials to be used for teaching in the classroom. As a foundational skill, activity analysis and occupation-based activity analysis is utilized throughout students' careers and into their lives as practitioners, making Occupation-Based Activity Analysis, Second Edition the perfect textbook for the occupational therapy or occupational therapy assistant student, faculty, or clinician.

Illuminating The Dark Side of Occupation

Dec 22 2021 This innovative volume introduces Twinley's concept of 'The Dark Side of Occupation'. Focused on less explored and under-addressed occupations, it is an idea which challenges traditional assumptions around the positive, beneficial, health-promoting relationship between occupation and health. Emphasising that people's individual experiences of occupations are not always addressed and may not always be legal, socially acceptable, or conducive to good health, the book investigates how these experiences can be explored theoretically, in practice and research, and in curriculum content for those learning about occupation. Beginning with a discussion of some assumptions and misunderstandings that have been made about the concept, the substantive chapters present and analyse tangible examples of the concept's applicability. This ground-breaking and practice-changing text provides ideas for future research and highlights contemporary, internationally relevant issues and concerns, such as the coronavirus pandemic. This book is an essential purchase for students in occupational therapy and science, and valuable supplementary reading for practitioners. It is also relevant to a wide interdisciplinary audience with an interest in human occupation, encompassing anthropologists, councillors, criminologists, nurses, and human geographers.

Transactional Perspectives on Occupation Jul 29 2022 An occupation is, most simply put, any activity we participate in that engages (occupies) our attention, interests, and/or expectations, at any point throughout the life course. This book offers an emerging and innovative perspective on occupation, based in the work of American philosopher John Dewey and other pragmatists, that challenges accepted ideas. Each chapter presents a lively and multifaceted dialogue on transactional perspectives on occupation. Scholars from Europe, North America, and Australasia have written a diverse set of arguments and case studies about occupation, covering theoretical, methodological and applied issues relevant to the topic. In addition, contributors make connections with significant authors from various disciplines that make clearer the roles of occupation and occupational science across many cultures and contexts. The transactional perspectives articulated in this book both implicitly and explicitly suggest that occupations are forms of activity that create and re-create a multitude of our relationships with the world. Often taken for granted by some academic disciplines, occupation is a core element of human life. This book is a provocative and critical analysis of the focal concept for occupational therapy and science.
