Behind the Curtain of Scholarly Publishing Oct 09 2020 Until now there has been little consideration of the intellectual and historical impact editors have had on the young and ever-evolving field of writing studies. *Behind the Curtain of Scholarly Publishing* provides new and seasoned scholars with behind-the-scenes explorations and expositions of the history of scholarly editing and the role of the scholarly editor from the perspectives of current and former editors from important publications within the field. Each chapter in the collection examines the unique experiences and individual contributions of its authors during their time as editors, offering advice to scholars and potential editors on how to navigate the publication process and understand editorial roles. The contributors provide multiple perspectives on the growth, transformation, and, in some cases, founding of some of the most influential publishing venues in writing studies. The personal and historical narratives, along with the unique perspectives and insightful analyses of the individual authors in *Behind the Curtain of Scholarly Publishing*, offer needed transparency and context to what has historically been an opaque, yet inevitable and consequential, part of academic life. This volume will help researchers in the field understand the publishing process. Contributors: Cheryl Ball, David Bartholomae, Charles Bazerman, Jean Ferguson Carr, Douglas Eyman, Muriel Harris, Byron Hawk, Alice Horning, Paul Kei Matsuda, Laura Micciche, Mike Palmquist, Michael Pemberton, Malea Powell, Kelly Ritter, Victor Villanueva, Victor Vitanza, Kathleen Blake Yancey

Designing Integrated Care Ecosystems Nov 21 2021 This book brings together research and theory about integrated care ecosystems with modern Socio-Technical Systems Design. It provides a practical framework for collaborative action and the potential for better care in every sense. By combining the aspirations, information, resources, activities, and the skills of public and private organizations, independent care providers, informal care givers, patients and other ecosystem actors, this framework makes possible results that none of the parties concerned can achieve independently It is both a design challenge and a call for innovation in how we think about health care co-creation. Illustrative stories from many countries highlight different aspects of integrated care ecosystems, their design and their functioning in ways that allow us to push the operating frontiers of what we today call our health care system. It explains what it means to design higher levels of

coordination and collaboration into fragmented care ecosystems and explores who the participants should and can be in that process. Written for a broad audience including researchers, professionals, and policy makers, this book offers readers new thinking about what outcomes are possible and ways to achieve them.

Sams Teach Yourself Object Oriented Programming in 21 Days Aug 07 2020 Sams Teach Yourself Object Oriented Programming in 21 Days differs from other OOP books in two main ways. Many classic OOP books are designed for software engineers and teach at an academic level. Sams Teach Yourself Object Oriented Programming in 21 Days presents accessible, user-friendly lessons designed with the beginning programmer in mind. Other OOP books work to present both OOP and to teach a programming language (for example: Object-Oriented Programming in C++). Although Sams Teach Yourself Object Oriented Programming in 21 Days uses Java to present the examples, the book is designed to present concepts that apply to any OOP environment.

Workbook and Lab Manual for Sonography - E-Book Sep 07 2020 Review important sonography learnings with Curry and Prince's Workbook for Sonography: Introduction to Normal Structure and Function, 5th Edition. This well-constructed review tool supports and completes the main text by providing an excellent introduction to sonography while preparing users to accurately identify sonographic pathology and abnormalities. Each workbook chapter opens with review questions on material from the corresponding chapter in the main text. Review questions are followed by drawings from the text — with parallel sonograms where appropriate — that include leader lines to label structures, but not the labels themselves. Workbook users will fill in the labels to identify structures in the drawings and sonograms, reinforcing visual and auditory learning from the text. Answers can be looked up in both the workbook appendix and by comparing the workbook figures to the labeled figures in the main text. Unlabeled line drawings and images from every chapter provide reinforcement of what you should be noticing on the scan. Direct correlation with each chapter from the main text enables immediate, thorough review of material. Review questions test your knowledge of the information learned in the text. NEW! Chapter on

musculoskeletal sonography covers the latest use of ultrasound technology to visualize muscle, tendon, and ligament anatomy. NEW! Chapter devoted to pediatric sonography introduces you to the knowledge needed to work in this nascent specialty. NEW! Coverage of 5D technology familiarizes you with automated volume scanning. NEW! Updated content reflects the latest ARDMS standards and AIUM guidelines. NEW! Updated line drawings accompany new sonograms.
